Your independent
supplier

This newsletter shall inform you about the latest news in the market of gravure cylinder manufacturing, about inventions, developments, new products we have evaluated and about our activities for your cylinder manufacturing process. Take the challenge!

Speedchrome - EL

Catalyst for conventional sulphuric acid chrome electrolytes, which raises significantly its performance.

Properties

- Efficiency: + 50 %
- Plating time reduction: - 30 %
- Hardness: up to 1150 HV 0.1
- Increased, regular fine micro crack structure
- Electrical energy savings: 30 %
- Electrolyte cooling: up to 30 % less energy required
- Cylinder wear at printing: dramatically reduced!

Available in crystalline form, tins per 1 kg. Mixture 1 kg Speedchrome—EL per 100 kg CrO₃

Guess, we should talk?

Moreover we supply

Nickel—pellets

Copper—clippings

Anode—materials

Copper wire

Chemicals

Our offer:

- **Elhard liquid** hardness additive
- **Elhard powder** hardness additive
- **Roto-Shine** degreasing paste
- **Elskin-MF** separating solution
- **Smog Off** surface active agent for regular chrome plating

➔ Further informations are available in the chemical product overview which is attached.

In case of any request feel free to contact Mrs. Monika Pliening or Mr. Andreas Bühler.
